All flooring and surface material require regular maintenance to keep them looking good and performing well.

REGULAR MAINTANACE

1. Sweep or vacuum the floor to remove all loose grit or sand.
2. Very lightly soiled floors should be damp mopped with clear water.
3. As a regular schedule, based on conditions such as traffic and soil to which your flooring is subjected, the floor should be cleaned with a solution of Solarbrite® No Rinse Neutral Floor Cleaner (see container for instructions). Heavily soiled floors may require rinsing to remove excess soil. Use a household sponge mop or a long-handled scrubbing brush, making certain that contact is made with the flooring surface. Do not use scouring pads of any kind or steel wool. Hard-to-remove heel marks or scuffs may be removed by rubbing with a nylon pad dampened with Solarbrite® No Rinse Neutral Floor Cleaner.
4. Our urethane finish should not be buffed.

CAUTION

Dish detergents are not suitable cleaners for your vinyl floor. They leave an oily residue which attracts soil and causes a reduction of gloss. The oily residue can become slippery when wet.

REFINISHING

Depending upon the traffic your floor receives, the finish may eventually diminish. Solarbrite® Matte Finish Dressing is recommended for high traffic areas.

1. Wash the floor with Solarbrite® No Rinse Neutral Floor Cleaner (see cleaning instructions on container).
2. Apply Solarbrite® Matte Finish Dressing floor polish with a floor finish applicator or soft cloth. A second coat should be applied after the first is completely dry. In a commercial environment, three coats may be required.
3. After multiple coats of floor finish are applied, it may be necessary to use a stripper to remove old floor dressing to allow a new coat of floor dressing to be applied.

FOR YOUR FLOORS PROTECTION AND TO AVOID POSSIBLE PERMANENT DAMAGE TO YOUR FLOOR USE SOLARBRITE® MATTE FINISH DRESSING.

SPECIAL CARE INSTRUCTIONS

In general, most spilled household substances should be wiped up as soon as possible with an absorbent paper towel or cloth, washed with full strength Solarbrite® No Rinse Neutral Floor Cleaner. If removal is not accomplished, dampen a clean cloth with mineral spirits and wipe lightly over surface. Caution: DO NOT USE MINERAL SPIRITS WHERE A FIRE HAZARD EXISTS.

CAUTION

When cleaning or stripping floors, traffic should be excluded from the area to avoid the possibility of slipping. Place mats at outside entrances to prevent water, snow or ice from being tracked onto your floor. Water, other liquids and foreign matter on the floor can cause it to be very slippery and should be removed at once. Improper finishes can also cause slipperiness.
